

6. Using the data on the **age of death**, find the five number summaries, and construct a box-and-whiskers plot.

7. Using the below interval for the age of the presidents at their death(x-axis), tally the number of presidents falling into each group -- these are the frequencies (y-axis).

Age at Death	40-49	50-59	60-69	70-79	80-89	90-99
Frequency						

8. Construct a histogram of the frequency for each rating as categorized in the table above.
